## What is a problem? WHY works in Postman but won't work with Laravel/Guzzle library?

laravel api postman guzzle dingo-api

In Postman, it looks like you are sending the token as a request parameter. In your code, it looks like you are using form\_params, which are application/x-www-form-urlencoded.

Try this: <http://docs.guzzlephp.org/en/stable/quickstart.html#query-string-parameters>

```
$res3 = $client3->post('https://app.EXAMPLE.com/api/update/'.$serial, [  
    'headers' => [  
        'Authorization' => 'Bearer '.$res2['token'],  
        'Content-Type' => 'application/json'  
    ],  
    'query' => [  
        'token' => $res2['token'],  
        'bookingdate' => '07/07/2018 12:00 am',  
        'notes' => $SpecialRequests  
    ]  
]);
```
