## Profile

I am ready for using all my skills and capabilities to develop a better version of me.
I've studied two years track backend PHP Laravel and I have been skilled in
- creating CMS
- dashboards
- ecommerce dashboards

Dealing with admin, users and all interfaces with competitive database schema and high security.

## Projects

### Tdwinat ⬚

Web site to Make a Post with selected category help you to manage your blog effectly.
this web site I have developed it using
- PHP
- MySql
- Html
- bootstrap

### Full Project Analysis And Design ⬚

System designed for relation between trader and client and supplier to manage all operations such as generate invoice for goods have been bought or sold and generate barcode for each product and credit – debit balances and another infinity services all of these designed especially as easy and enjoyable user experience.
Technologies :   Adobe XD

### Hospital System ⬚

Client or Patient can enter Page and Reserve his appointment with the doctor "he want" as all doctors displayed with details (Name – Image - Specialty)
And once he reserve the doctor or admin open his dashboard and has accessibility to approve reservation or cancel if approve the patient will be receive an email success or apologizing and can take another appointment .
This system build with technologies like:
- Laravel version 8
- MySql Database
- Mailgun service
- Bootstrap
- Authentication system using Jetstream

### Project Frontend Bootstrap ⬚

Scrolldown page has been builded using Bootstrap5 and Html5
Consists of :
Navbar - Slider show very beautiful and responsive - Contact with email box

### Paypal Integration ⬚

Checkout button once you click redirect you to PayPal box with details like total price if you had been logged you confirm payment it redirect you back with API success message 200 OK Successfully Checkout

**BookStoreApi** ↗

A Simple REST API Crud you can show store edit update delete author or book or user in laravel using only restful api and you can browse all project using Postman

**Clothes Store** ↗

Proiect has been builded using laravel 8 for clothes merchant to display his goods and dash board for user to track his process of buying and dashboard for admin to manage his application and all data dislpayed .

**Blog System** ↗

All backend methods for user to make post and publish in ready blog template it can also add catogories and make crud operations for each part in the app

**Advanced ecommerce,** *working on it ......* ↗

Filled with many screens and each page is designed for specific purposes
It is full of features such as:

- Multi Image upload
- Advanced validations
- Tag sysytem
- Return Order option
- Adavanced Product Search
- PDF Invoice generate
- Paypal Integeration
- Product Order Tracking
- Authentication Guards : user - admin - super admin

All of these have not been skilled but working on it and learn every day more and more . . .
And you can follow my code progress on github.
